(a) $c \geq \theta$: dense block (Eq. 3)

$c = 5 \geq \theta{=}4, \quad \text{surplus} = c - \theta = 1, \quad l \leftarrow l_{\text{dense}}{+}1 = 3$

output: $[0,\ 5]$

(b) $c < \theta$: jump (Eq. 2)

$c = 2 < \theta{=}4, \quad l \leftarrow \max(l{+}1,\ L[\text{next}]{-}W_0) = \max(4,\ 8{-}3) = 5$
